

A CASE STUDY IN INGENUITY

Implementing an innovative asset management solution delivers a range of valuable benefits:

More Control:

Improve your organization's performance when you establish better control over the workflows that involve your managed equipment.

Cost Savings:

An asset management program ensures more effective use of your organization's equipment. The correct, working assets are always available. And the value of each individual asset is preserved.

Improved Risk Management:

Tracking and auditing processes built into your asset management solution optimize equipment purchase, deployment and management decision-making.

Loss Prevention:

Rapid investigation and recovery of missing assets thanks to a complete audit trail and constant monitoring of equipment transactions.

IMPROVE YOUR ORGANIZATION BY MANAGING YOUR ASSETS

Asset Management Solutions Begin with American Ingenuity.

Asset management is a core practice of every kind of organization, from small businesses to large enterprises, from local non-profits to federal government agencies. Organizations of every size can benefit from implementing an Asset Management Solution that will:

- ▶ Better manage risk
- ▶ Reduce equipment loss and expenditures
- ▶ Improve staff performance and efficiency
- ▶ Improve equipment service and support, so assets retain their value

Business Growth:

Creates collaborative workflows that allow your business units to work more tightly together, connecting your organization's operations to your business goals.

Fosters Accountability:

Training personnel to care for your organization's assets will foster a wider culture of responsibility and accountability.

ELECTRONIC ASSET MANAGEMENT SOLUTIONS FROM AMERICAN LOCKER™

Managing your organization's assets has never been easier. Now when your company's employees need access to company computers, tablets, mobile phones, and all kinds of business equipment and company assets, they simply visit the American Locker kiosk, enter their credentials, and withdraw or deposit their items.

A dedicated RFID reader is integrated with the kiosk that allows your company's employees to swipe their badges and go straight to asset-dedicated lockers. With American Locker's electronic technology, your company can lock and unlock company assets quickly and easily, and then get right back to work.

Providing your company's employees with access to the business assets they need —when they need them and where they need them — saves time and money. But the real benefits to your organization are delivered through our software solution. Every asset in your company is checked in and out through our advanced asset management system. With our sophisticated backend reporting, we make it easy to manage, track, and reconcile all asset activity via a dedicated portal.

Our Electronic Asset Management Lockers are engineered to provide the most advanced security solution for organizations of all sizes. With non-corrosive materials, fewer pry points and secure locking mechanisms, the mechanical design is tried and tested and wholly manufactured in the USA, offering your business with years of reliable operation.

These electronic, self-service kiosk systems save your organization time and money by making it easy to manage the locker activity in your company. We give you the freedom and flexibility to choose from a variety of applications and configurations. We offer total customization of the Electronic Asset Management Solution so you can adapt our system to your company's specific physical and logistical requirements.

This Campus Thrives on Technology – A Case Study

In 2016, a Fortune 500 technology-centric company began re-engineering the way they use IT to serve their employees. Their company had grown dramatically from thousands of employees by the end of 2010 to tens of thousands of employees by 2019. Serving a corporate population that large takes some American Ingenuity. And of course, that means American Locker. Here's why.

Lockers are a great way to safely and securely store an item. You might think of school lockers or gym lockers as an obvious application. But for more than 100 years, American Locker has been applying technology to lockers making them more useful to companies and the individuals they serve.

This technology centric corporation thrives on technological innovation. They developed what an initiative that was engineered, among other things, to replace their use of external technologies by bringing those technologies inhouse to create a robust internal IT tool kit. Because of their technology centric corporate culture, they had the benefit of a talent pool that could support that initiative.

As this initiative was applied to serving over 30,000 employees, their team turned to American Locker to help implement their vision. Lockers had become an integral piece of their puzzle.

The law enforcement community uses our lockers to store and manage evidence. Dry cleaners use our lockers to give their customers 24/7 access to picking up and dropping off their clothes. We make lockers that protect people's personal items from harsh elements at ski resorts and our keyless lockers give guests the freedom to rent a locker and walk away empty handed.

Kiosks and software give managers great flexibility in providing services and their guests great advantages when it comes to using the lockers in ways that individually suite them the best.

For this technology-centric corporation, their flexible locker solution began with the company's Asset Store. Developed by their engineering team, this corporation now provides employees with access to a self-service portal through their Asset Store that lets them conveniently request phones, laptops, and other accessories as needed, without having to wait for approval. Chargers, for example, are easily misplaced or lost completely. When employees require a replacement or need to start testing work on a different mobile device, they turn to the Asset Store. The overall experience is a lot like shopping at an online retailer versus using an enterprise asset management system. The Asset Store tells their employees where a device is available, so they can pick it up on their own.

And this is where the lockers come in. By installing American Locker's Advanced Line Electronic Asset Management Lockers in strategic locations all around the technology-centric corporate campus, employees can go to the location that's most convenient to them to check out the technology they need.

A CASE STUDY IN INGENUITY

At these smart lockers, employees just scan their badge, choose their device and, once the appropriate door has opened, pick up the phone, tablet, laptop or VR device they were looking for and move on. When they are finished with it, they return and check the device back in. No questions asked.

Nowadays, with so many new employees, the engineering team has automated most of the company's onboarding process as well as the employee provisioning systems — and that includes managing the supply chain that guarantees the laptops and phones for these new employees are available and accessible.

The Electronic Asset Management Solution empowers employees. Much of that empowerment is the result of their access to American Locker's Lockers. Today, this technology-centric corporation's employees face far less friction when they first join the company, for example, or when they need to replace a broken laptop, get a new phone to test features or simply order a new screen for their desk.

Thanks in part to American Locker's kiosk, self-service technologies and flexible backend software solutions, this technology-centric corporation is able to easily merge their Enterprise Supply Chain technologies with American Locker's advanced security solutions.

It's our commitment to innovation and technological advancement that has been driving our security solutions for over 120 years. The companies we serve are not just customers, they're partners in the evolution of this technological advancement. And that's just one more example of American Ingenuity at work.

American Locker. That's Over 100 Years of American Ingenuity

American Ingenuity. It's a certain kind of innovation that we, as Americans, are known for. The kind of innovation that comes from boldly attempting what no one has ever done before. Which basically describes our entire company history. When we started our business, we accomplished things that no one else had ever even attempted — like inventing the first coin-operated locker. Right from the start, American Locker has continually led this industry we invented with an unstoppable series of innovative solutions. Our years of innovative American manufacturing have led us to create the widest range of customized solutions in the industry. Invented here. Made here. That's American Ingenuity.
